

SHIP MAINTENANCE

SUBSEA GLOBAL
S O L U T I O N S

Ships account for 5% of the world's total oil consumption, and fuel constitutes the single largest operating cost of a vessel today. Hull and propeller efficiency are critical to the operational and economic success of any vessel.

Propeller Polishing:

Subsea Global Solutions uses a multi-stage polishing system to deliver a propeller polish that is capable of exceeding a Rubert Scale "A" finish. Higher propeller efficiency equals lower fuel consumption and less greenhouse gas emissions.

Hull Cleaning:

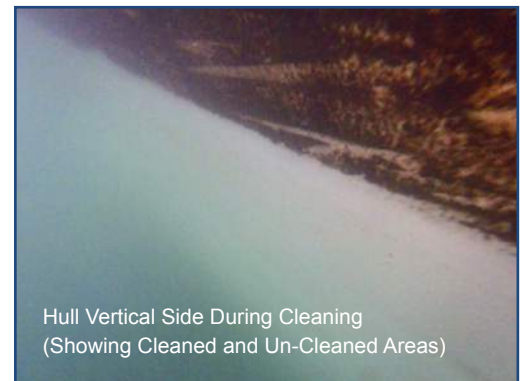

Subsea Global Solutions prides itself in "Managing your coating". Regular cleanings assure the most consistent hull efficiency between dry dock intervals, with minimal to no degradation of the hull coating. We utilize specialized hydraulic multi-brush systems designed to clean the most sensitive coatings, without adversely affecting their integrity.

Ship Inspection:

Subsea Global Solutions is class approved to inspect and certify vessels for condition and structural integrity. We maintain certifications with Lloyd's Register, DNV-GL, The American Bureau of Shipping, Bureau Veritas, Rina, NK class and other certifying agencies. We also regularly include non-class inspections in conjunction with our propeller polishing, and other routine services. Regular inspections help assure that any issues are discovered early and addressed quickly, at the lowest possible cost with minimal operational impact.
